Ms. Cari Oberfield
Dovetail Energy, LLC
P.O. Box 249
Delaware, OH 43015

Subject: NOV - Additional Information

Dear Ms. Oberfield:

Thank you for your September 6, 2019, response to Ohio EPA, Division of Surface Water's (DSW) August 9, 2019, Notice of Violation letter.

Your response to this violation stated that the percent total solids (%TS) results were higher than expected resulting in an exceedance of the calculated agronomic rate. You have indicated that the %TS sampling frequency has now been changed to provide more timely results to be used in calculating the agronomic rates prior to land application.

To resolve this violation, please provide the following information:

1. %TS used for the agronomic rate calculations performed prior to land application for each field used in 2018;
2. %TS used to calculate the actual agronomic rates for each field as submitted in Table 8 of the 2018 annual sludge report (ASR);
3. The total gallons that were land applied at each field used in 2018;
4. The total acreage beneficially used at each field in 2018;
5. The soil test results lab sheets for each field used in 2018;
6. All %TS results for Dovetail for the months of March, April, October, November, and December in 2018.

This information will be used to determine an actual accounting of the amount of biosolids applied to each field in 2018 and the beneficial use term of restriction.

No later than September 30, 2019, please submit the requested information to Ohio EPA DSW to resolve the violation cited in the August 9, 2019, NOV.

Should you have any questions, please contact me at betsy.vanwormer@epa.ohio.gov or 614-644-2150.

Sincerely,

Betsy L. VanWormer, P.E.
